In today's evolving era, changes and significant achievements are being made in every field, particularly in science. After the independence of our country, attention to science, especially foreign languages, has become more intense. Teaching each science using modern innovative technologies and techniques is one of the most important requirements of today's era. In addition, the first president of the Republic of Uzbekistan I.A. After Karimov made a number of decisions on teaching and learning foreign languages, a new environment and period began in our country. According to the decision, modern textbooks, methods and technologies were developed. In the current modern education, the demand for interactive methods, innovative technologies, and information technology to throw out the educational process is growing day by day. One of the main reasons for this is that when using modern techniques, in contrast to the traditional education that has been up to this time, the conditions necessary for the development, formation, acquisition and education of the pupil's personality are created. The role and role of modern techniques and innovative technologies is incomparable. There are several effective ways to teach foreign languages, in particular, English. In particular, during the course, it is possible to use English-language video rollers, dialogs, film or cartoon displays, tape recorders and CDs, which are considered quite a traditional method. The use of these technical tools will make the students' foreign language learning process more interesting and effective. The importance of modern techniques in teaching a foreign language cannot be overemphasized. It is here that several techniques are being used, which are now widely used. For example: 1. The methods' -B-B " (we know, we want to know, we know). This method is a necessary method for the growth of students' understanding of the text in the course of the lesson, the ability to tahlil it. 2. "Clever attack" (Brainstorming) is a method of generalizing ideas. The essence of this method is an expression from the generation of ideas, the development of them in a critical and constructive state, to the several stages of problem-solving processes over time, based on collective cooperation in students. 3. "Problematic situation solution " (Creative Problem Solving). To apply this method, the beginning part of the story is read and the readers who find the section of its yakovchi are referenced. This method contributes to the development of thinking skills in the student. 4. "Quick question" (Quick answers) Bunda students will be asked a question on the topic mentioned. This method serves to increase the effectiveness of the mentioned lesson.

5. "Pantomime" (Pantomime)- an explanation of different words by gestures. This method is suitable for the purpose if it is used in a lesson where very difficult topics need to be explained, or when students are

tired of doing written exercises. 6.'Story chain " (a chain story)- something is told in a story. Tiradi this method develops oral speech of readers. 7.The method of'speaking pictures " (When pictures speak) is much more convenient,it helps in teaching English , in developing the oral speech of students, for this it is necessary to use pictures related to the subject. 8."Quiz cards" (Quiz cards)- this card is distributed according to the number of students and ensures that all students participate in the lesson at the same time, which significantly saves time. 9."Cluster" method. Allocation to clusters is a pedagogical strategy that helps students to think freely and openly about a particular topic. This method is basically an effective way to evoke new thoughts, add more new ideas to existing knowledge. 10.'Insert " method. Bunda presents a text or story to the reader and requires the reader to re-speak it. This method is considered a powerful method to support activity ,observability and understanding when dealing with text. So it turns out that each method, as already mentioned above, has effective ways of teaching foreign languages. Effective use of modern pedagogical technologies and techniques in each lesson in the teaching process helps students to think independently and freely, to search, to approach each issue seriously, to be interested in acquiring knowledge.If it is able to organize a cooperation activity between the teacher and the reader , both sides will be able to achieve a positive result. In conclusion, at a time when there is a high need to teach foreign languages in today's rapidly developing world, the use of modern methods, innovative educational technologies in the educational process makes this process fast and effective. In particular, technological tools come to hand in every skill of learning a foreign language(reading, writing , listening, understanding and speaking). While the education system of our country aims to educate a competent, mature and free-thinking person, we can make our contribution to the prosperity of our country by teaching foreign languages to young people by studying modern methods and technologies and using them effectively.
